PSCAD: Versão Gratuita

The screenshot displays the PSCAD Free software interface. The top menu bar includes Home, Project, View, Tools, Utilities, and a Return Certificate (Free Edition) button. The toolbar contains various icons for file operations (Cut, Copy, Paste, Delete), simulation (Clean, Build, Build Modified, Run, Stop, Pause, Skip, Step, Snapshot, Slow), and editing (Plot Step, Save Scenario, Delete Scenario, View Scenario, Active Scenario, Back, Forward, Up, Undo, Redo, Select, Wire Mode, Zoom In, Zoom Out, Zoom Extent, Zoom Rectangle). The main workspace is titled 'master:Main() Start Page' and features a 'Go To MyCentre' button. The 'Updates' section highlights 'PSCAD v4.6.3 Update 5' (10/21/2020 07:12:03 PM) and 'PSCAD v4.6.3 Update 4' (08/05/2020 02:15:51 PM). The 'News' section includes 'New PSCAD Webinar Series' (05/27/2020 08:29:42 PM) and 'COVID-19 Update' (03/25/2020 03:06:58 PM). The 'Videos' section shows 'Blackbox features - PSCAD Version 5' and 'PSCAD™ V5 - New Feature Blackbox'. The 'Recent Videos' section lists 'Blackbox features - PSCAD Version 5' (08/26/2020 04:09:31 PM). The 'Build Messages' panel at the bottom shows 0 Errors and 0 Warnings.

Welcome to PSCAD!

Updates

PSCAD v4.6.3 Update 5
10/21/2020 07:12:03 PM

PSCAD v4.6.3 Update 5 is now available for eligible users. Recent updates provided by some anti-virus programs had triggered the blocking of PSCAD compile time and runtime batch files, as they contained multiple period '.' characters. These filenames have been changed to include only a single period, thereby resolving the blocking issue. We have also included some improved licensing error logging.

For more details about this update, please contact sales@pscadd.com.

PSCAD v4.6.3 Update 4
08/05/2020 02:15:51 PM

We are pleased to announce the release of PSCAD v4.6.3 Update 4 which supports TLS 1.2, includes an updated Master Library 4.6.3.2, and supports improved lock-based and certificate licensing.

All Professional v4.6.3 and Educational Edition licenses are eligible for this update. Those with active maintenance can obtain the download via MyCentre. If it is not automatically available in your MyCentre account, please contact your workgroup administrator, or sales@pscadd.com.

For more details about this update, please click [here](#).

New Transformer Models for PSCAD

News

New PSCAD Webinar Series
05/27/2020 08:29:42 PM

We are happy to announce we are hosting another Webinar Series!

For topics, dates and details visit our website [here](#).

We hope you can join us!

COVID-19 Update
03/25/2020 03:06:58 PM

The health and safety of our employees and customers remains our top priority. Until further notice, PSCAD will operate as a virtual company and all employees will be working from home or a safe remote location. We are focused on remaining available for our clients, and will continue to operate with the same timeliness that our customers and colleagues expect from us. Please stay safe and healthy.

Support for the older Intel Fortran compilers and GFortran compilers – PSCAD v5.0
02/19/2020 09:02:40 PM

Support for the Intel Fortran compilers earlier than 12.0, and GFortran 4.2.1 has been removed as of PSCAD v5.0. If you will be using PSCAD v5.0, compiling may be performed using either the free Fortran compilers that come bundled with PSCAD (GFortran v4.6 and GFortran v8.1), or by using the professional edition of Intel Fortran compiler (versions 12 through 19).

If your project calls any libraries or objects, these must be pre-compiled using the same compiler as your project.

PSCAD: Biblioteca Master

Quando um projeto está aberto, também podemos acessar os componentes através dos seguintes menus.

Criando uma Simulação: *New Case*

- *New Case*: Cria uma nova simulação
- *Name*: Nome do arquivo de simulação
- *Path*: Lugar onde salvar a simulação

Criando uma Simulação: Parâmetros do Projeto

Menu *Project*

- *Duration of Run*: Tempo total de simulação
- *Time Step*: Intervalo de tempo entre os cálculos
- *Plot Step*: Intervalo de amostragem usado nos gráficos

Importância do Time Step

Mundo Real:

- O mundo é contínuo
- Existe um número **INFINITO** de instantes em um intervalo de tempo

$$y(t) = \sin(120\pi t)$$

Importância do Time Step

Simulação Digital:

- O mundo é discreto
- Existe um número **FINITO** de instantes em um intervalo de tempo

$$y[kT_s] = \sin(120\pi kT_s)$$

Importância do Time Step: ainda a senoide

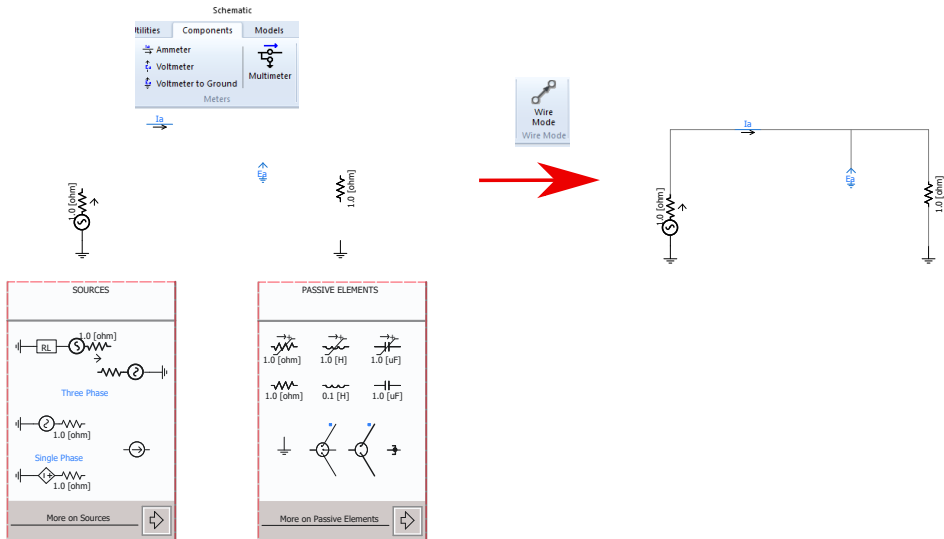

Simulação Digital: Muito preciso

Simulação Digital: Pouco preciso

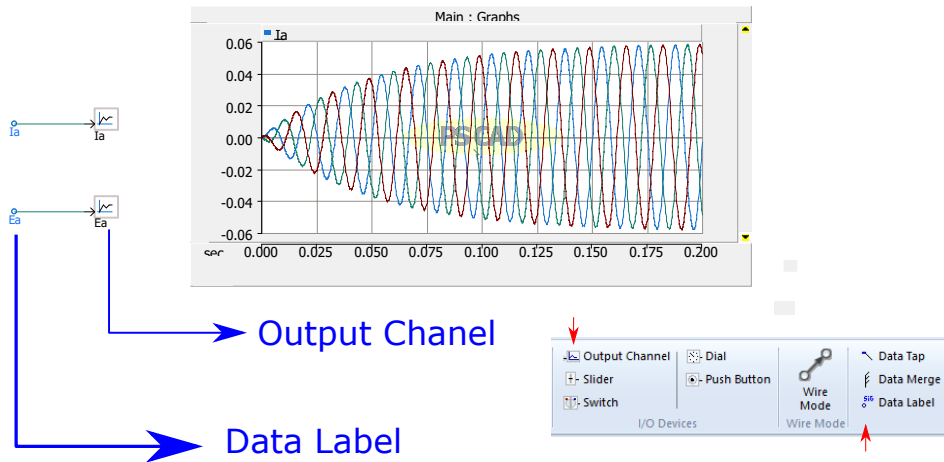

Criando uma Simulação: Continuando

Criando uma Simulação: Configuração dos componentes

Criando uma Simulação: Gráficos

Exportando Dados

Criação de Componentes e Bibliotecas

Criação de Componentes: Usando Scripts

Automação de Simulações

Aplicação - Retificadores

Aplicação: Inversores

Aplicação: Sistemas de Controle

Aplicação - Máquinas Elétricas

Aplicação - Faltas

Conclusões

Obrigado pela Atenção!
